

Boost weed control, improve resistance management and save money.

Glyphosate alone isn't good enough for your pre-seed weed control program. That's because glyphosate's single mode of action can only do so much against certain hard-to-kill broadleaf weeds, including:

- Cleavers
- Dandelion
- Narrow-leaved hawk's-beard

...and it can't control volunteer Roundup Ready® canola at all. You need multiple modes of powerful action in your pre-seed burnoff and FMC has you covered.

Aim® EC herbicide + Express® PRO herbicide + glyphosate: the right combination for spring

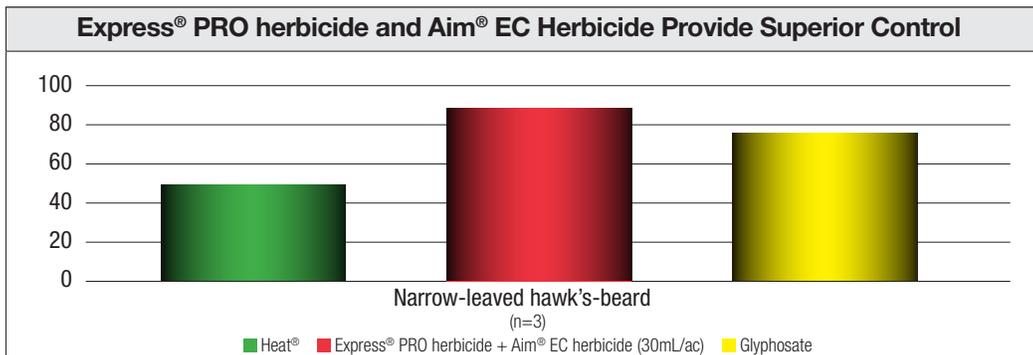

- Up to 15 days extended control† to keep fields clean from flushing weeds.
- Three modes of action working together on weed control = significantly cleaner cereal fields.
- Proactive resistance management.

GROUPS
14 | 2 | 9*

Multiple groups for the ultimate resistance management plan.

Weeds Controlled:

- Cleavers
- Dandelion
- Hemp-nettle
- Narrow-leaved hawk's-beard
- Scentless chamomile
- Volunteer canola
- White cockle
- ...and more

Source: FMC Internal Trials 2018, 42-55DAA. Treatment applied without glyphosate.

Ask your retailer how you can save an additional \$0.50/acre when you purchase Aim® EC herbicide and Express® PRO herbicide together.

*When Aim® EC herbicide, Express® PRO herbicide and glyphosate are tank-mixed.
†Degree and duration of extended control is dependent on weed infestation levels and on environment conditions at and following treatment.

Always read and follow label directions.
