13

Your first line of defence against cleavers in canola

What is Command® 360 ME herbicide?

Command® 360 ME herbicide is a Group 13, soil-applied, pre-emergent herbicide that provides early, extended control of cleavers in front of your canola. It does not require any incorporation and is taken up by the roots of germinating cleavers.

How does Command® 360 ME herbicide help my farm business?

Outstanding cleaver control with a new mode of action. Command® 360 ME herbicide is the only registered Group 13 herbicide. It will control cleavers before they are up and as they emerge, with a new mode of action that helps manage resistance. See the reverse for grower comments.

Command® 360 ME herbicide works well with all herbicide-tolerant canola systems.

Command® 360 ME herbicide can play a key role in maximizing the yield of your Roundup Ready®, LibertyLink® or Clearfield® canola. Command® 360 ME herbicide controls the initial flushes of cleavers. This will take the pressure off the in-crop herbicide. This application can control any secondary flushes, which will be much smaller, resulting in overall improved control of cleavers.

This visual illustrates how well Command® 360 ME herbicide works in tandem with glyphosate and Liberty®.

Quick facts:

Early, extended control of cleavers

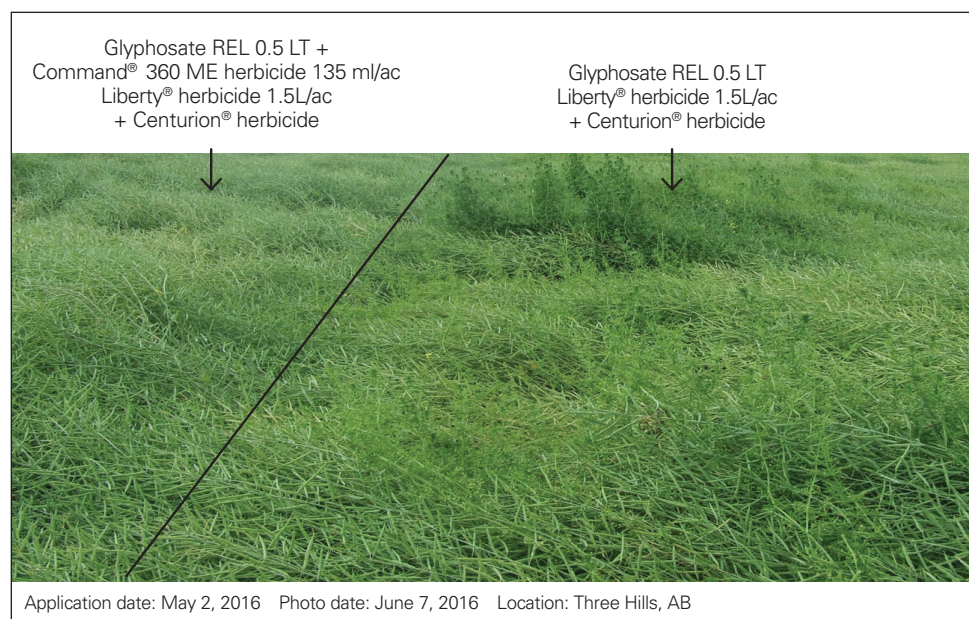

Apply before seeding canola

Use with any herbicide-tolerant canola system

Water volume:
10 gal/ac (100L/ha)

Package size:
2 x 5.4 L jugs per case

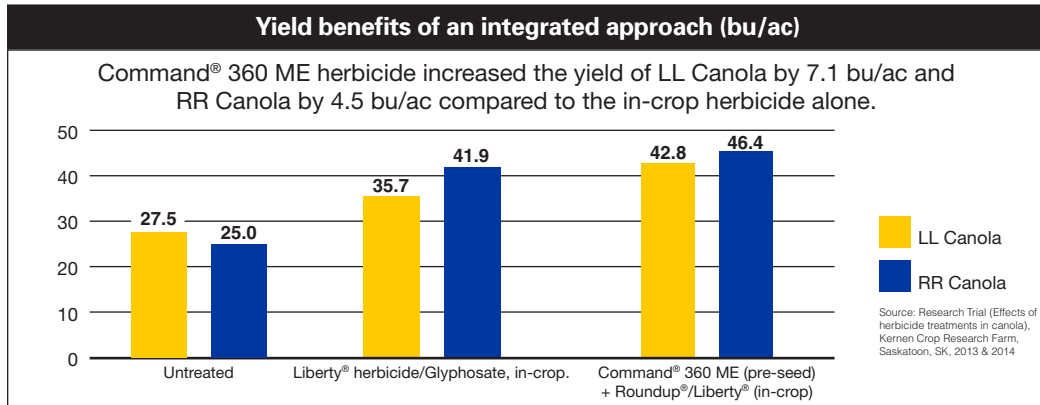

Activation requirements:
5-10 mm (1/4") of rain

Application date: May 2, 2016 Photo date: June 7, 2016 Location: Three Hills, AB

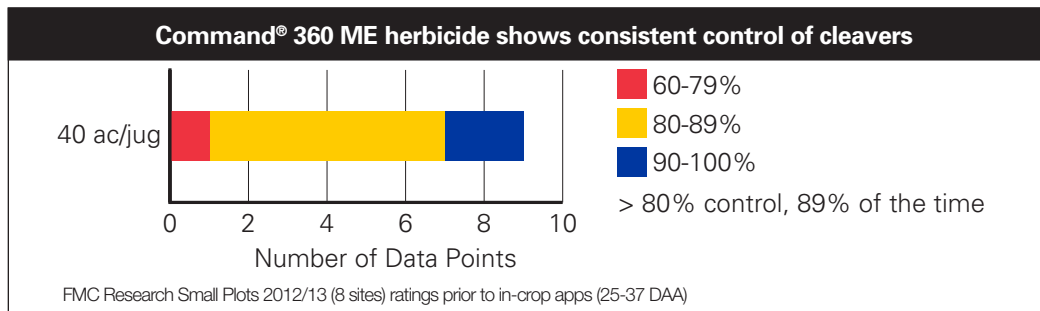

Here you can see the benefits of an integrated herbicide approach.

Works with your current burnoff program. Command® 360 ME herbicide comes in an easy-to-use liquid formulation. Tank-mix it with glyphosate for your burnoff application, eliminating an extra pass and saving you time.

What rate should I use?

Command® 360 ME herbicide should be applied at a rate of 0.135 L/ac (.33 L/ha) or 40 acres per jug. This visual highlights the consistency of cleaver control delivered by Command® 360 ME herbicide at that rate.

What growers are saying.

"I was really impressed with Command®. The field was clean and free of cleavers. It was night and day different compared to the neighbouring canola field where Command® was not applied. I will definitely be using it again next year."

George Hinz, Humboldt, SK

"Just swathed my RR canola in a field that has been a 'cleavers wreck' in the last few years and I can't believe how clean this field is after using Command®! There were a few patches of cleavers where there were some spray misses, otherwise totally clean. Will definitely use again."

Richard Goerzen, Carstairs, AB

"Have been fighting with cleavers for several years now and can't get a good control with glyphosate or Liberty® chemistries. Sprayed Command® and got a nice rain 5 days later, checked the field when the canola was just emerging and noticed that all the new growth of cleavers were coming up yellow. Very pleased with the results and residual and will be using it in years to come."

Duane Kent, Hamiota, MB
