

# Unleash the power of 4 modes of action in your post-harvest burnoff

## What makes post-harvest weed control so important?

In the fall, perennial and biennial weeds transfer water and nutrients to their roots for the winter. Stopping this process gives you cleaner fields next spring. Fall application also means you're less vulnerable to unpredictable spring field conditions. Using glyphosate alone, however, can let you down in terms of weed control and the buildup of resistant weeds. Give glyphosate the help it needs.

Thinking post-harvest weed control? Think FMC. Our post-harvest products deliver exceptional weed control, resistance management and, for 2020, a new way to help your community.

## What is Intruvix™ herbicide?

New Intruvix herbicide, added to glyphosate, is the only product that delivers four modes of action and the most complete broadleaf weed label available. When performance and resistance management are critical, Intruvix herbicide is the ideal choice for a post-harvest burnoff.

## How does Intruvix herbicide help my post-harvest burnoff?

### Manage Weed Resistance

- Resistant weeds are a growing problem for Canadian farmers
- Intruvix herbicide uses 4 modes of action (including glyphosate) to tackle resistant weeds

### Top-Quality Performance

- Intruvix herbicide has quick activity coupled with systemic action for unparalleled weed control
- Over 30 labelled weeds including kochia, cleavers, volunteer canola and narrow-leaved hawk's-beard

### Flexibility

- Suitable for all soil types from brown to black to grey
- Canola, corn, oats, spring barley, soybeans, wheat (spring or durum) and white beans can be planted the spring following a post-harvest Intruvix herbicide application.

GROUPS  
**2,4,14 & 9\***

### Quick facts:

**Water volume:**

10 US gal/ac (100 L/ha)

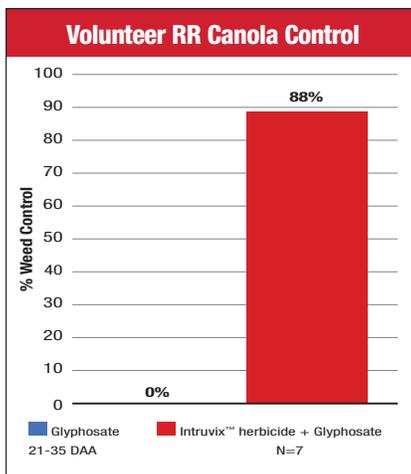

**Packaging:**

One case treats 80 acres

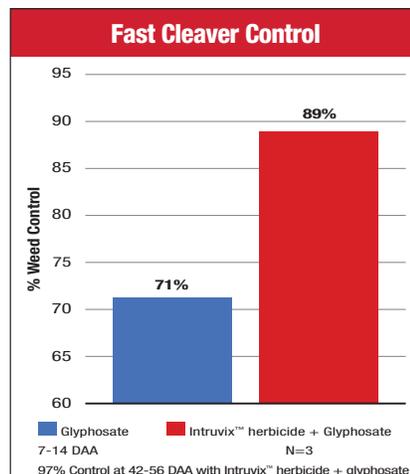

**Cropping options the spring following a post-harvest application:**

Canola, corn, oats, spring barley, soybeans, wheat (spring or durum) and white beans.

## What's in the box?

Intruvix herbicide is a co-pack of 3.72 kg of Intruvix™ A herbicide + 1.2 L of Intruvix™ B herbicide. One (1) case treats 80 acres.

## Which herbicides can be tank-mixed with Intruvix herbicide?

Must be tank-mixed with glyphosate.

No additional surfactant is required when tank-mixed with 0.5 REL glyphosate per acre.

The following mixing order is recommended: Intruvix A herbicide, then Intruvix B herbicide, then glyphosate.

### FMC WILL DONATE \$0.10/AC ON FALL HERBICIDE SALES TO LOCAL COMMUNITY GROUPS.

FMC Canada will donate 10 cents\* for every acre of our fall herbicides sold between July 15 and October 31, 2020. That includes not only Intruvix™ herbicide, but also new Focus® herbicide, Aim® EC herbicide, Express® brand herbicides and our fall-applied PrecisionPac® blends.

## Weeds

- Canada fleabane (up to 8 cm)
- **Canada thistle** (rosette)<sup>1</sup>
- **Cleavers**
- Common ragweed (up to 8 cm)
- Cow cockle (up to 3 leaf)
- **Dandelion**
- Downy brome
- Flixweed
- Foxtail (giant, green)
- Hemp-nettle
- **Kochia** (up to 8 cm) (Incl. Group 2 & 9-resistant biotypes)
- Lady's thumb
- Lamb's-quarters
- Persian darnel
- **Narrow-leaved hawk's-beard** (up to 8 cm)
- Nightshade (Eastern black, black) (up to 5 cm)
- Morning glory
- Redroot pigweed
- **Russian thistle**
- **Scentless chamomile** (up to 8 cm)<sup>1</sup>
- **Stinkweed**
- Velvetleaf
- Volunteer flax
- Volunteer barley
- Volunteer wheat
- Waterhemp (tall) (up to 5 cm)
- Wild oats
- **Wild buckwheat** (up to 8 leaf)
- Wild mustard
- **White cockle** (rosette)<sup>1</sup>

<sup>1</sup>Suppression

<sup>1</sup>Original 360 g/L formulation
