

THINKING PRE-SEED BURNOFF? **THINK FMC.**

Using a glyphosate add-in can maximize early-season weed removal in your spring burnoff and manage resistance.

2 *great reasons why adding an FMC product to your burnoff is the right choice for cleaner fields.*

- 1. Early weed removal is essential for maximizing yield potential. Get better control of tough broadleaf weeds like dandelion, cleavers, kochia, narrow-leaved hawk's-beard and, of course, volunteer canola.*
- 2. Adding other modes of action to your spring burnoff application will help delay potential glyphosate resistance from developing. We all know the value that glyphosate brings to the field and we need to ensure it remains efficacious well into the future.*

CLEAN FIELDS AND A BETTER START TO SPRING

INTRUVIX HERBICIDE *Unleash the power of 4 modes of action in your cereal burnoff*

-  Group 2, 4, 9*, 14
-  Pre-seed
-  Wheat (spring, durum, winter), barley, oats
-  Resistant kochia, cleavers, volunteer canola, waterhemp, Russian thistle, narrow-leaved hawk's-beard, wild buckwheat
-  1 case treats 80 acres
-  *Must be tank-mixed with glyphosate

Intruvix™ herbicide vs Blackhawk®
21 DAA

Intruvix herbicide (47 g/ac + 15 mL/ac) + glyphosate*

Blackhawk (300 mL/ac) + glyphosate*

Source: FMC Internal Trial, Lethbridge, AB 2020
*Rate 0.5 L/ac REL

COMMAND CHARGE HERBICIDE *A stronger, more complete burnoff with extended cleaver control*

-  Group 13, 14
-  Pre-seed
-  Canola (all herbicide-tolerant systems)
-  Cleavers, kochia, volunteer canola, Russian thistle, flixweed, waterhemp, pigweed. Extended control of flushing cleavers.
-  Each case treats 80 acres
-  Tank-mix with glyphosate for 3 modes of action

Complete burnoff before canola
5 DAA

Untreated Command® Charge herbicide (80 ac/case) + glyphosate*

Source: 2020 FMC Internal Trials, Portage la Prairie, MB
*Rate 0.5 L/ac REL

AIM EC HERBICIDE *Boost your burnoff. Keep your cropping options open.*

-  Group 14
-  Pre-seed
-  Canola, pulses, cereals, soybeans, flax, sunflowers, mustard, potato
-  **24 mL/acre:** round-leaved mallow, stinkweed, flixweed, lamb's-quarters, waterhemp, redroot pigweed
-  **30 mL/acre:** Resistant kochia, cleavers, volunteer canola (including glyphosate resistant biotypes), Russian thistle, shepherd's purse, plus above weed list
-  Glyphosate, Express® Brand herbicide, Command® 360ME herbicide, select Bromoxynil, 2,4-D, MCPA

Aim® EC herbicide + MCPA vs Goldwing®
21 DAA

Aim EC herbicide (15 mL/ac) + MCPA (189 mL/ac) + glyphosate*

Goldwing (133 mL/ac) + glyphosate*

Source: FMC Internal Trial, Lethbridge, AB 2020
*Rate 0.5 L/ac REL

EXPRESS BRAND HERBICIDES *Powerful burnoff from shoots to roots*

-  Pre-seed
-  80 acres per jug
-  Must be tank-mixed with glyphosate

Which Express® brand herbicide is best for your spring burnoff?

Express® FX herbicide. Three modes of action when tank-mixed with glyphosate before cereals for powerful burnoff and superior resistance management.

Express® PRO herbicide. Up to 15 days of extended control of germinating key broadleaf weeds and burnoff of tough to control weeds that often escape an application of glyphosate alone.

Express® SG herbicide. Trusted glyphosate partner delivers reliable burnoff and keeps your cropping options open.

Narrow-leaved hawk's-beard control

Glyphosate alone
Glyphosate + Express PRO herbicide
