

# Professional-strength burnoff with extended control of your toughest broadleaf weeds.

## What is Express<sup>®</sup> PRO herbicide?

Express PRO herbicide, added to glyphosate, provides extended activity on key broadleaf weeds such as cleavers, dandelion, flixweed, narrow-leaved hawk's-beard, stinkweed, volunteer canola and wild buckwheat.

## How does Express PRO herbicide help my farm business?

- **A longer-lasting burnoff.** Express PRO herbicide controls key broadleaf weeds for an extended period of up to 15 days, including weeds that often escape an application of glyphosate alone.
- **Effective resistance management.** Express PRO herbicide provides a powerful second mode of action with your glyphosate.
- **Systemic activity within the plant.** Just like glyphosate, controlling weeds all the way down to the root so they can't grow back.
- **Can be tank-mixed with any glyphosate.**

### BURNOFF

#### Quick facts:

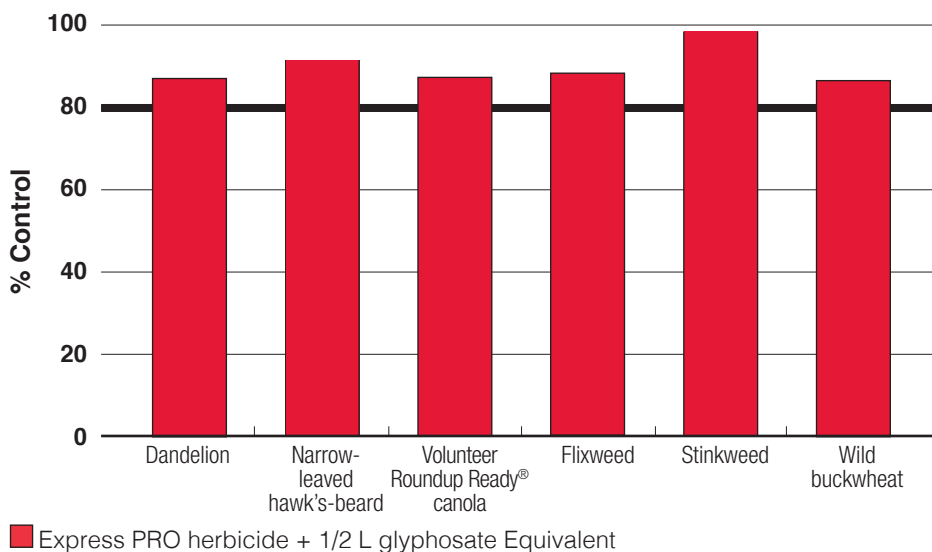

Must be tank-mixed with glyphosate.

**Water volume:**  
5 gal/ac (50 L/ha)

**Packaging:**  
One (1) jug treats 80 acres

**Powered by Solumax<sup>®</sup> Technology:**  
Soluble granules that dissolve completely into solution, for fast and easy sprayer cleanout, efficient plant absorption and consistent weed control results.

**Express PRO herbicide Pre-Seed Weed Control**

Source: Internal Research Trials 2005-2007. Average ratings 21-35 days after application.

## How can I use Express® PRO herbicide with glyphosate?

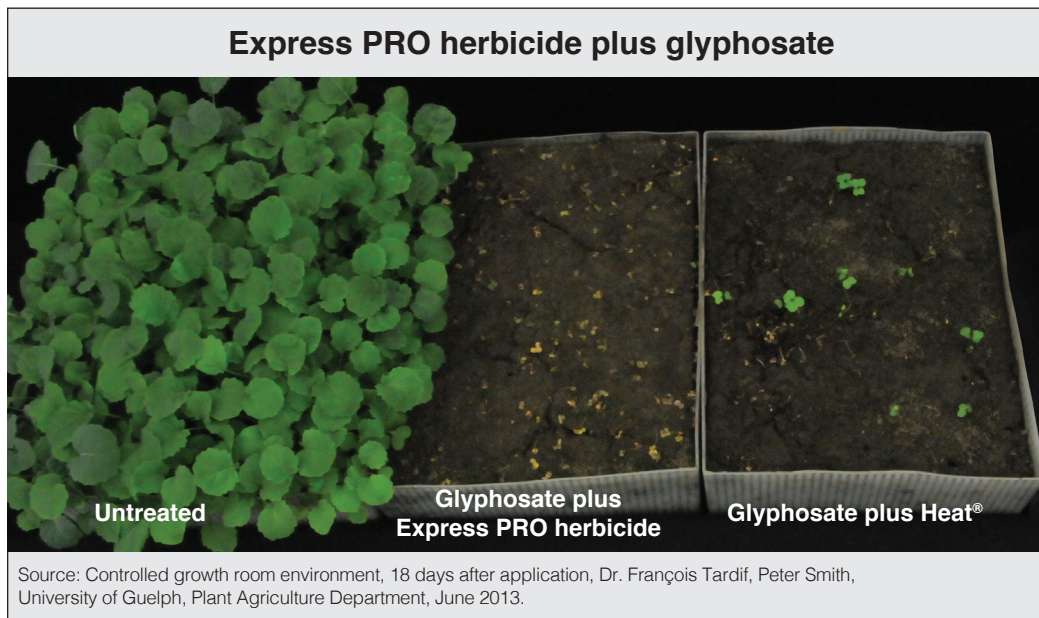

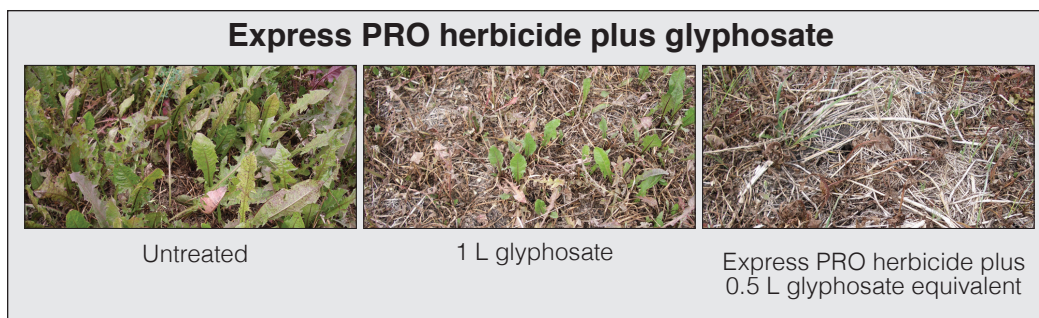

**Pre-seed burnoff.** Wait a minimum of 24 hours after the application of Express PRO herbicide and glyphosate before planting wheat (spring, durum, winter) or barley.

**Chemfallow.** Allow at least 10 days after treatment before tillage.

**Post-harvest burnoff.** Apply to fields where wheat, barley or oats will be seeded next spring. Note: Limit to one application of Express PRO herbicide per season.

## How effective is Express PRO herbicide on my toughest broadleaf weeds?

See for yourself. Check out the Express PRO herbicide video on our YouTube channel, FMC Ag Canada.

### Crops:

#### 24 hours after application:

- Spring wheat
- Durum wheat
- Winter wheat
- Barley

**10 Months:** Canola, faba beans, field corn, flax, peas and soybeans

**22 Months:** Lentils

Oats may be seeded anytime the following season.

Fields treated with a post-harvest application of Express PRO herbicide in the fall may be seeded in the spring to wheat (spring or durum), barley, oats or fields may be summerfallowed.

### Broadleaf control:

(Express PRO herbicide plus 0.5 L/ac glyphosate equivalent<sup>†</sup>)

- Canada fleabane
- Canada thistle<sup>†</sup>
- Chickweed
- Cleavers<sup>E</sup>
- Common ragweed
- Cow cockle
- Dandelion<sup>E</sup>
- Downy brome
- Flixweed
- Giant foxtail
- Green foxtail
- Hemp-nettle
- Kochia
- Lady's-thumb
- Lamb's-quarters
- Narrow-leaved hawk's-beard<sup>†</sup>
- Night-flowering catchfly<sup>†</sup>
- Persian dandelion
- Redroot pigweed
- Russian thistle
- Scentless chamomile
- Stinkweed
- Volunteer barley
- Volunteer canola<sup>E\*</sup> (including glyphosate tolerant)
- Volunteer barley
- Volunteer flax
- Volunteer wheat
- White cockle
- Wild buckwheat
- Wild mustard
- Wild oats

<sup>†</sup>Original 356 g/L formulation.

<sup>†</sup> Suppression

<sup>E</sup> Extended Control.

<sup>E\*</sup> Will not provide extended control of Clearfield® canola.
