

# Mustang® Maxx Insecticide

## ALFALFA

### Choose healthier, longer-lived alfalfa stands with Mustang® Maxx insecticide

Mustang® Maxx insecticide brings the pyrethroid difference to your alfalfa crop, fighting yield-robbing infestations of weevils, cutworms, leafhoppers and others before they take hold in your fields. Treating insect complexes early with Mustang Maxx insecticide will give you the grower's edge during key growth windows for yield gains and significant forage quality improvements.

The enhanced pyrethroid chemistry of Mustang Maxx insecticide works on contact and ingestion, and may be applied before, during or after planting. It also makes a great tank mix partner with other products approved for use on alfalfa. Plus, you'll get the flexibility of short preharvest and re-entry intervals.

For healthier, longer-lived alfalfa stands and the bottom-line benefit of an increased dollars-per-acre return on your investment, choose Mustang Maxx insecticide.

#### Quick Facts

- Enhanced pyrethroid chemistry works on contact with residual control of many pests
- For at-plant, pre- or post-emergence application
- Short three-day preharvest interval for cutting or grazing
- Proven, broad-spectrum insecticide for higher yields
- Controls widest range of insects; few insecticides can make the same claim
- May be applied by both ground and air
- Can be tank mixed with other labeled insecticides, fungicides or herbicides

## Recommended Use:

**Use rate:** 2.24-4.0 fl. oz./A

**Active Ingredient:** Zeta-cypermethrin

**Chemistry Class:** Pyrethroid, IRAC Group 3A

**Formulation:** 0.8 lb. AI/gal.

**Signal Word:** WARNING

**REI:** 12 hours

**PHI:** 3 days (cutting or grazing), 7 days (harvesting seed)

Field trial in Higginsville, MO. Photo taken 6/29/07.

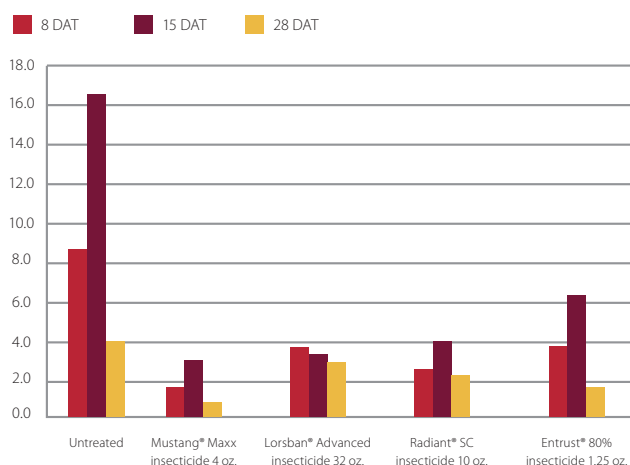

## Restrictions:

Apply in a minimum of 2 GPA by air or 10 GPA by ground. ULV oil is prohibited.

A maximum of 8 oz./A (0.05 lb. ai/A) may be applied per cutting with a maximum of 24 oz./A (0.15 lb. ai/A) per season.
