

Harmony® SG Herbicide

with TotalSol® soluble granules

SOYBEANS

The foundation for a good, solid broadleaf weed control program in soybeans.

When soybeans are rotated with other crops such as sugar beets, dry edible beans, wheat and corn, the level of weed control in soybeans has a direct impact on the profitability of the following crop. Harmony® SG herbicide can be tank mixed with many soybean herbicides to enhance the performance on hard-to-control weeds.

Harmony SG herbicide delivers:

- Cleaner fields for rotational crops.
- Cleaner fields at harvest, which allows you to combine faster and leaves you more time to prepare for next year's crops.
- Broad-spectrum control of key problem weeds, including common lambsquarters, redroot pigweed, velvetleaf, annual smartweed and wild mustard.

Use Harmony SG herbicide at a rate of 0.125 oz./A when used alone or in combination with other herbicides.

This photo was taken June 4, 2009, near West Bend, Iowa. Harmony SG herbicide 0.125 oz./A + glyphosate 32 oz./A was applied on June 1, 2009. The weeds present included lambsquarters, velvetleaf and waterhemp.

Always read and follow label directions and precautions for use. Some products may not be registered for sale or use in all states. As of November 1, 2017, the USEPA registration for DuPont™ Harmony® SG herbicide with TotalSol® soluble granules was sold by E.I. du Pont de Nemours and Company to FMC Corporation.
