

Rhyme® Fungicide

GRAPES

PRODUCT INFORMATION:

Guard your grape yields with Rhyme® fungicide from FMC. Rhyme fungicide is one of the most systemic triazoles on the market and protects your grapes from root to fruit. The active ingredient, flutriafol, is rapidly taken up by plant tissues and translocates quickly to protect the whole vine from tough diseases like powdery mildew and black rot. Quick penetration into plant tissues allows for rapid movement to the sites of established infections, arresting tough diseases to protect your yields.

QUICK FACTS:

- Curative and preventative control of powdery mildew and black rot in grapes.
- One of the most systemic triazoles on the market.
- Translocates rapidly to protect the whole plant from disease.
- Rainfast within two hours.
- Tank mix compatible with other fungicides, insecticides and adjuvants for broader-spectrum of pest control.

Application Guidelines:

Re-Entry Interval: Five days for girdling or turning of grapes; 12 hrs. for all other activities.

Pre-Harvest Interval: 14 days

Product Use Rate: 4-5 fl. oz./A

Maximum amount of Rhyme® fungicide per season: Do not apply more than six applications per year or 30 fl. oz./A per year.

Drip Irrigation: Use Rhyme fungicide for control of foliar diseases. See label for specific use rates and timing.

Drip Irrigation and Micro-Sprinkler Chemigation Use Guidelines:

For control of foliar powdery mildew, use Rhyme fungicide in two consecutive drip or micro-sprinkler applications as part of a standard foliar spray program.

Apply preventatively or when conditions are favorable for disease development.

Apply the second application seven to 14 days following the first application.

Apply in sufficient irrigation water to wet the rooting profile of the grapes or to 12 inches of soil.

Delay subsequent irrigation for 24 hours following a drip application or micro-sprinkler application for the best results. Repeat as necessary if conditions are favorable for disease development.

Application Instructions:

Thorough spray coverage is critical to maximize efficacy of Rhyme fungicide.

Minimum spray volumes: 30 GPA by ground; 10 GPA by air.

Heavy, dense, late-season foliage will benefit from higher application volumes vs. early-season application on small plants.

May be tank mixed with insecticides, herbicides, fungicides and adjuvants.

Label:

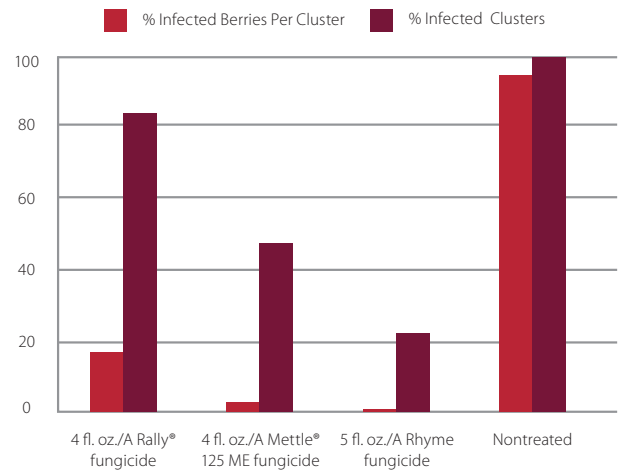

Active Ingredient: Flutriafol (Group 3)

Mode of Action: Demethylation inhibitors; blocks the synthesis of ergosterol in sensitive species of fungi.
