

# REVOLUTIONIZE HOW YOU PROTECT YOUR SEASON.

The 3RIVE 3D® application system from FMC is a revolutionary at-plant crop protection delivery platform that gives growers the freedom to farm faster. The system integrates formulation technology, application technology and active ingredients to efficiently cover more ground in less time with fewer refills, saving water, fuel, labor and time.

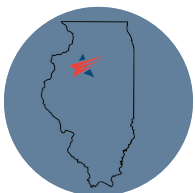

## GO ABOVE AND BEYOND SEED TRAITS AND TREATMENTS.

The 3RIVE 3D application system saves you time, fuel, labor, water and worry as it delivers additional protection to your most valuable corn, soybean or sunflower input investment.

- The compact tank easily mounts to all major planter brands.
- Water and product mix in the applicator with no measuring or mixing required.
- Mixture expands up to 50X to deliver early in-furrow protection.
- Eliminates saddle tanks, reduces refills and trips through your fields.

Growers who commit to and purchase minimum qualifying volumes of qualifying products in any combination are eligible for a 3RIVE 3D application system at **no initial cost**.

***"With the 3RIVE 3D application system, we apply four to five ounces of product per acre, and we need only 40 ounces of water, so there's not a bunch of added weight on the planter. I can do 400 to 500 acres with one fill."***
