## CORN

## New Foliar Disease Protection Exclusive to FMC

New and exclusive to FMC, this multiple MOA fungicide harnesses the power of three active ingredients to help protect your crops from yield-robbing foliar diseases. This new fungicide combines a novel molecule in the SDHI class, fluindapyr, with the most systemic triazole on the market, flutriafol and azoxystrobin for superior rust control. This innovative and exclusive combination of active ingredients provides effective, reliable control against gray leaf spot, Northern corn leaf blight, common and Southern rust and more in corn, grain sorghum, wheat, triticale and barley.

This multiple mode of action fungicide provides efficient, broad-spectrum control with the benefit of a low use rate. It also delivers long-lasting residual control with high translaminar movement. That means your entire plant is protected by the latest technology available for foliar disease control.

### QUICK FACTS:

- Labeled for use in corn, grain sorghum, wheat, triticale and barley.
- Foliar disease protection from gray leaf spot, Northern corn leaf blight, common rust and Southern rust.
- Combination of three active ingredients, including fluindapyr, a novel molecule in the SDHI class.
- Reduces abiotic stress during grain fill after application.
- Low use rate: 7-9 fl. oz./A.
- Long-lasting residual.

## Product Information

**Active Ingredient:** flutriafol (Group 3), fluindapyr (Group 7), azoxystrobin (Group 11)

**Mode of Action:** 3, 7, 11

### Targeted Diseases:

- Gray leaf spot
- Northern corn leaf blight
- Common rust
- Southern rust

**Application Rate:** 7-9 fl. oz./A

**Application Timing:** VT – R1
