

Xyway® LFR® Fungicide

SOYBEANS

Inside-Out Foliar Disease Protection From Day One

Just one At-Plant application of Xyway® LFR® fungicide from FMC delivers foliar disease protection that lasts all season long. Xyway LFR fungicide minimizes the impact of challenging diseases and soil conditions that can rob soybean yields. It provides At-Plant, systemic foliar disease protection from the inside out. This protection is delivered via a Liquid Fertilizer Ready (LFR) formulation designed for superior mixing and stability in liquid fertilizers.

The proprietary active ingredient in Xyway LFR fungicide, flutriafol, is rapidly taken up by the plant and quickly translocated within the plant as it grows, delivering systemic and long-lasting residual control. Flutriafol has the unique capability to move from the soil upward through the plant throughout the growing season, unlike any other fungicide active ingredient.

QUICK FACTS:

- Season-long, inside-out, At-Plant foliar disease protection that helps support outstanding yields, stalk health and standability.
- Available for application through any liquid fertilizer system.
- Foliar disease protection from yield-robbing diseases such as frogeye leaf spot, septoria brown spot and charcoal rot.
- Contains the active ingredient flutriafol for unmatched residual activity and translocation throughout the plant.

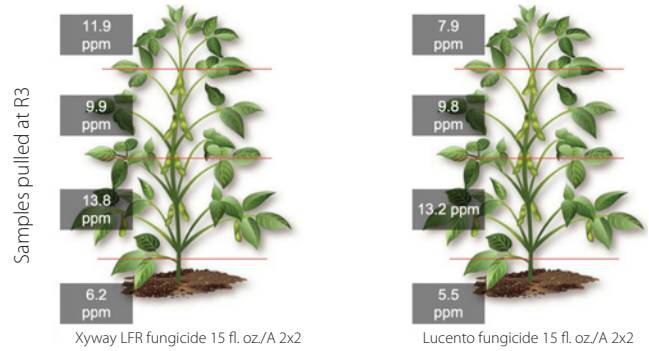

Product Information:

- **Active Ingredient:** Flutriafol
- **FRAC Group:** 3
- **Mode of Action:** Demethylation inhibitors; blocks the synthesis of ergosterol in sensitive species of fungi.
- **Application Rate:** 7.6 - 15.2 fl. oz./A for 15" rows
- **Labeled Diseases:** Charcoal rot, frogeye leaf spot, septoria brown spot
- **Preharvest Interval (PHI):** 21 days

Product Attributes & Benefits:

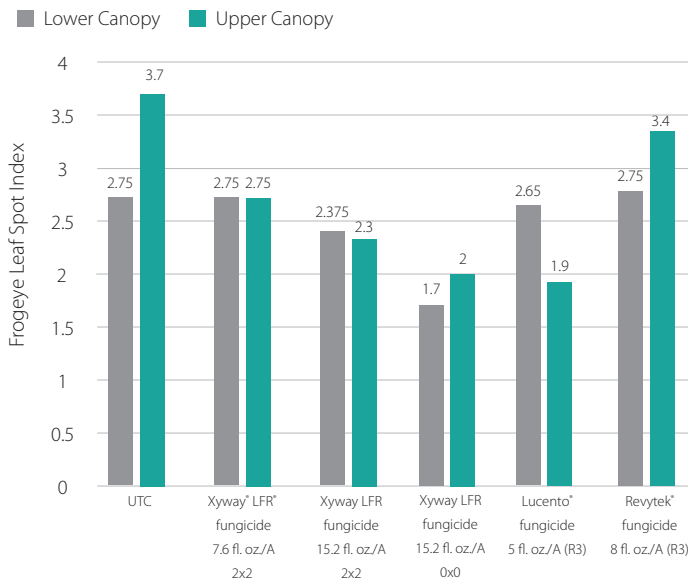

- Inside-out foliar disease protection
- Suppression through the growing season
- Plant and spray once with an At-Plant application
