

PrecisionPac® Application Innovation

CUSTOMIZE YOUR WEED CONTROL TO REDUCE WASTE AND WONDERING.

PRODUCT OVERVIEW

PrecisionPac® application innovation from FMC makes it easy for retail agronomists to create custom herbicide blends specific to each grower's crop and field conditions. Each blend is as unique as the agronomic needs of the acre on which it will be applied.

Eight active ingredients deliver a broad spectrum of prescriptive weed control delivered in exactly the amount growers need. Multiple modes of action help growers manage resistance. Many component products are formulated using our patented TotalSol® soluble granules, which dissolve into a true solution for a clear advantage in the field and at clean-out.

Delivered in disposable bags, PrecisionPac custom blends reduce waste and clean-up time. No triple rinse is required.

Our proprietary PrecisionPac application innovation technology creates low-volume, granular herbicide custom blends based on growers' specific weed control needs. Product measuring is handled inside the machine, eliminating the grower's need to mix in the field.

Growers receive a customized herbicide blend at prescribed rates and ratios for their specific field and weed control needs, ensuring accurate application.

QUICK FACTS

- Dispenses up to six different herbicide products in nearly 50 custom blends to prescriptively target a grower's specific weed spectrum.
- Accurately meters each active ingredient in the correct proportions.
- Handles measuring and mixing at the retail site, eliminating the grower's need to do it in the field, reducing opportunities for spills and other potential mishaps.
- Entire fields can be treated with a single bag of preblended product that can be carried in one hand, reducing packaging waste, storage and surplus disposal.
