

Anthem® Flex Herbicide

Protect Your Corn Yields With Anthem® Flex Herbicide

CORN

PRODUCT INFORMATION:

Anthem® Flex herbicide from FMC provides residual control of grasses and broadleaf weeds in corn including Palmer amaranth and pigweeds. This low-use-rate herbicide provides the resistance management power you need with the flexibility you want. It has a wide application window and comes in an easy-to-mix formulation.

Anthem Flex herbicide delivers long residual control and suppression of broadleaves including kochia, velvetleaf and lambsquarters in corn. Tank mix Anthem Flex herbicide with glyphosate, atrazine or another suitable herbicide for additional weed control in your preplant burndown.

With Anthem Flex herbicide, you have a powerful resistance management tool. It is effective at controlling weeds with known resistance to glyphosate and ALS herbicides.

QUICK FACTS:

- Labeled for use in corn.
- Applied in all tillage systems, including no-till.
- Early preplant, preplant/preemergence and postemergence application timings.
- Low use rate: 2.75-7.28 fl. oz./A.
- Control of key annual grasses and broadleaf weeds.
- No known resistance.

Target Weeds:

Annual grasses
Foxtails
Kochia
Lambsquarters
Morningglory
Palmer amaranth
Pigweeds
Velvetleaf
Waterhemp

Application Timing:

Early preplant: 14 days from preplant up to prior to spike stage.

Postemergence: from emergence through stage V4. Early post applications are allowed. Refer to label for specific recommendations.

Product Use Rate:

Use rate ranges from 2.75-7.28 fl. oz./A depending on soil type and organic matter. Refer to the label for information on suppression of weeds based on application rates and timing.

Restrictions:

Do not apply more than 0.266 lb. ai/A of pyroxasulfone and 0.031 lb. ai/A of carfentrazone-ethyl in a 12-month cropping year.

Please see the label for a complete list of restrictions.

Label:

Active Ingredient: Pyroxasulfone (Group 15); carfentrazone-ethyl (Group 14)

Mode of Action: Pyroxasulfone inhibits very-long-chain fatty acid synthesis as a Group 15 herbicide. It is a root and shoot growth inhibitor that controls susceptible germinating seedlings before or soon after they emerge from the soil. Carfentrazone-ethyl is a Group 14 herbicide that disrupts membranes by inhibiting the action of protoporphyrinogen oxidase, causing cell death.
