Anthem® Flex herbicide from FMC provides excellent residual control of grasses and broadleaf weeds, including pigweeds, such as Palmer amaranth and common waterhemp in cotton. This low-use-rate herbicide has a wide application window and comes in an easy-to-mix formulation. The long residual properties of Anthem Flex herbicide also make it an ideal layby treatment in cotton.

Cotton growers know that suppressing Texas panicum is crucial in coarse-textured soils, especially when cotton is rotated with peanuts. Anthem Flex herbicide delivers superior suppression of this troublesome weed. It provides 70-80% control of Texas panicum, while other Group 15 herbicides deliver only 50% control.

With more flexibility and no known resistance issues, Anthem Flex herbicide is an excellent weed management tool. Anthem Flex herbicide is even effective at controlling many weeds with known resistance to glyphosate and ALS herbicides.

**PRODUCT INFORMATION:**

**QUICK FACTS:**

- Labeled for use in cotton
- Apply as a layby treatment with post directed spray
- Low use rate: 1.4-3.8 fl. oz./A
- Control and suppression of key annual grasses and broadleaf weeds
- No known resistance
**Restrictions:**

Do not apply more than 0.0222 lb. ai/A of pyroxasulfone and 0.0159 lb. ai/A of carfentrazone-ethyl in a 12-month cropping year.

Anthem Flex herbicide may be applied on soils classified as sandy loams to provide preemergence control of certain grasses and broadleaf weeds as stated on federal label.

Apply Anthem Flex herbicide as a directed postemergence spray beneath cotton foliage when cotton stem has at least 4 inches of bark. Care should be used to avoid getting spray on foliage or green stems to prevent crop injury.

Please see the labels for a complete list of restrictions.
