

Aim® EC Herbicide

Target Tough Weeds and Immature Plants for Quick Desiccation and Harvest.

Product Information:

Keep harvest running smoothly with Aim® EC herbicide. Apply Aim EC herbicide as a harvest aid in dry legumes – dry peas, chickpeas and lentils – to desiccate or dry down stubborn weeds including kochia and Russian thistle.

Proper desiccation of uneven crop maturity and weed escapes can make direct harvesting and swathing of dry legume crops a quick and easy operation.

Apply Aim EC herbicide to dry-shelled peas and beans – crop group 6-C including dry peas, chickpeas and lentils – when 80-90% of the seed pods are yellow or buckskin in color and only 30% of the green leaves remain on the plant.

Recommended Desiccation Programs:

Option 1 (Standalone):

Aim EC herbicide 2.0 – 4.0 fl. oz. plus adjuvant.

Option 2 (Tank Mix):

Aim EC herbicide 1.5 – 2.0 fl. oz./A + Gramoxone Inteon™ herbicide or glyphosate plus adjuvant.

Use Rate:

1.0 - 6.1 fl. oz./A Aim EC herbicide may be applied alone in single application or in sequential application programs on dry peas, chickpeas and lentils.

DRY LEGUME

Quick Facts:

- Zero-day PHI.
- Reliable and consistent performance even under adverse conditions.
- Excellent tool for direct harvest dry peas, lentils and chickpeas.
- No complicated rotational restrictions: label allows 0 days to all labeled crops.
- Fast desiccation of weed escapes, which is essential to getting your crop out of the field faster.
- Cost-effective option for optimizing your defoliation and harvest schedule.

Adjuvant Recommendations:

- Add AMS at a minimum of 17 lbs./100 gal.
- MSO is the recommended adjuvant at 1-2 gal./100 gal. of spray solution.

Application Guidelines:

- Good coverage is essential for desiccation.
- 15-20 GPA minimum by ground application.
- A second application may be required in seven to 10 days.
- Use flat fan nozzles within recommended pressure ranges for best performance.
- Do not use FloodJet® nozzles or tips larger than 8008 that create a coarse spray.
