# **Avaunt® eVo** Insect Control

#### **Product Information**

Avaunt® eVo insect control provides rapid activity with residual control of Lepidoptera, as well as several species of weevils, beetles and leafhoppers in a wide range of specialty crops. Its unique mode of action has a low impact on beneficial insects with no cross-resistance to other insecticides, making it an excellent rotational tool with products like Altacor® insect control powered by Rynaxypyr® active, Exirel® insect control powered by Cyazypyr® active, Coragen® insect control powered by Rynaxypyr® active and Verimark® insect control powered by Cyazypyr® active. A newly expanded label, enhanced mixability and improved packaging makes Avaunt eVo insect control the right choice in your crop protection IPM program.

# Key Benefits of Avaunt eVo insect control

- A proven solution: Avaunt eVo insect control offers a unique spectrum of control, including both larval and adults, to protect your crop yields.
- **Unique mode of action:** Avaunt eVo insect control is the only Group 22 insecticide available on the market for labeled crops/pests.
- Improved formulation: The eVo formulation delivers better mixability in a new 30 oz. bottle.
- Performs under all conditions: Avaunt eVo insect control has
  reliable residual control with excellent rainfastness and is effective
  under a wide range of water pH, UV light intensity
  and temperatures.

## **Ouick Facts**

- Expanded label: Broader rate range on fruiting vegetables, leafy petioles subgroup; key pests in grapes, small fruit vine climbing and leafy vegetables; and new crop additions including beans, low-growing berries and small fruit vine climbing sub-groups. Pests on 2(ee) labels are now included on the Avaunt eVo insect control container label for added convenience.
- Ideal for IPM programs: Moderate to no impact on parasitoids and predators, making it an excellent fit in IPM programs.
- Smart resistance management tool: Used in rotation with different modes of action, Avaunt eVo insect control can reduce selection pressure placed on other chemistries.
- Rapid protection, resilient to weathering: Binds to
  the leaf cuticle for lasting residual activity of five to 14
  days against key pests. It remains stable under a range of
  environmental conditions and offers faster protection for
  your crops compared to IGRs, Bts and spinosyns.
- No mite flares: Avaunt eVo insect control won't flare mites, aphids or scales when used in accordance with the label.

#### **Label Information**

Active ingredient - Indoxacarb

Chemistry Class - IRAC Group 22, oxadiazine

Signal Word - Caution

Formulation - Water dispersible granules (WDG)

**REI** - 12 hours

**PHI** - Three to seven days for most crops; 14 days for pome and stone fruits

| pome and stone fruits                                       |  |
