

## ANTHEM<sup>®</sup> FLEX HERBICIDE & FINESSE<sup>®</sup> CEREAL AND FALLOW HERBICIDE

*Realize optimum wheat quality and yields through consistent and effective weed control.*

Anthem<sup>®</sup> Flex herbicide and Finesse<sup>®</sup> Cereal and Fallow herbicide make growing wheat a little easier. Both products provide effective control of troublesome weeds that face wheat growers and get fields off to a strong start. They also provide superior residual performance that keeps working through harvest to deliver a clean crop for faster and easier harvesting. Both products have excellent crop safety profiles, can be easily tank-mixed with other registered products and can be applied by ground or aerial application.

### Anthem Flex Herbicide

- Provides effective control of Italian ryegrass.
- To maximize performance on Italian ryegrass, apply prior to Italian ryegrass germination.
- Must be activated with rainfall or irrigation to provide control; a half-inch of water required to activate.
- Plant wheat a minimum of 1 inch deep but less than 1.5 inches deep.

### Finesse Cereal and Fallow Herbicide

- Delivers excellent control of winter annual weeds such as henbit and mustards.
- Can be applied at your normal topdress time to control broadleaf weeds with one weed-and-feed trip.
- Compatible with liquid fertilizers, making it easy and economical to achieve weed control after one application.

Henbit

Tansy Mustard

Italian Ryegrass
